DETAILED ACTION

Claims 1, 5-7, 9 were indicated as allowable in the office action issued on June 1, 2004. In view of the newly found patent granted to Mitzlaff (US 6,014,102), the novelty feature set forth in claims 1, 5-7, and 9 appeared to have been taught by Mitzlaff, the indicated allowability is, therefore, withdrawn. A new ground of rejection has been established herewith.

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 5-7, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mitzlaff et al (US 6,014,102) in view of Brown et al (US 4,754,280).

As per claim 1, Mitzlaff teaches a self correcting navigation system, the system comprises: means for providing position measurement signal representing the position of a mobile unit 114 (fig.1) and means for broadcasting an RF signal containing the position measurement data (col.4, lines 23-34; col.2, lines 45-55); first means for deriving the position data from the transmitted RF signal (col.4, lines 34-37); second means for effecting phase difference measurement of the RF signal to provide phase difference information (col.4, lines 8-18), and data processing means 103 (fig.1) for providing output representing the position data corrected for drift (col.4, lines 38-58). Mitzlaff does not explicitly teach displaying the position

Application/Control Number: 10/025,499

Art Unit: 3661

...

data, and Mitzlaff does not teach that the signal is an inertial measurement signal, and using

phase difference triangulation measurement to provide phase information. However, displaying

Page 3

position data would have been well known. Moreover, Mitzlaff teaches that the position

measurement signal can be any independent position determining system (col.2, lines 45-47), it

would have been well known that the inertial position measurement at a mobile unit is one type

of independent position determining method as taught by Brown in col.1, lines 11-35, an

ordinary person skilled in the art at the time the invention was made would be able to use the

well known inertial system of Brown for independently obtaining the position of the mobile unit

114 (fig.1) of Mitzlaff. Moreover, Mitzlaff teaches using a plurality of antennas at different base

stations at different locations for determining the phase difference (col.3, lines 42-47),

furthermore, using triangular technique for determining phase difference utilizing signals from

different receivers at different base stations would have been well known. It would have been

obvious to a person of ordinary skill in the art at the time the invention was made to apply well

known triangulation technique in determining phase difference of Mitzlaff in order to facilitate

estimating phase difference using well established triangulating method for determining the

phase difference of the position signal from the mobile device.

As per claim 5-7, 9, refer to claim 1 above.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

Application/Control Number: 10/025,499

Art Unit: 3661

or faxed to:

(703) 305-7687, (for formal communications intended for entry)

Page 4

Or:

(703) 305-7687 (for informal or draft communications, please label "PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park V, 2451 Crystal Drive, Arlington. VA., Seventh Floor (Receptionist).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thu Nguyen whose telephone number is (703) 306-9130. The examiner can normally be reached on Monday-Thursday from 8:00 am to 6:00 pm ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Black, can be reached on (703) 305-8233. The fax phone number for this Group is (703) 305-7687.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-1111.
